

Accelerating access to technology for an inclusive future

Looking for Providers to Lead Innovation

Understanding the perspectives of Pennsylvania providers is key to achieving successful systems change.

The Technology Accelerator Project is looking for providers to partner in developing a new Change Readiness Tool to support the successful adoption of remote support/monitoring and assistive technology solutions for providers statewide.

We are looking for providers across Pennsylvania to join us for a 90-minute virtual session to discuss promising practices, human and fiscal resources, existing policies, implementation barriers, and agency needs to adapt and employ remote supports/monitoring and assistive technologies.

**90 Minute
Virtual Sessions
Held Monthly
August - December**
